Explanation

Presence or absence of c.101dup mutation in SERPINE1 gene causing Hyperfibrinolysis in English Springer Spaniels and Welsh Springer Spaniels was tested. It is a hemostatic disorder, and clinical signs are related to impaired blood clot stability.

Mutation that causes Hyperfibrinolysis is inherited autosomally recessively which means that the disease develops only in those dogs who inherit mutated allele from both parents; disease affects dogs with P/P genotype only. The dogs with N/P genotype are considered carriers of the disease (heterozygotes). In offspring of two heterozygous animals following genotype distribution can be expected: 25 % N/N, 25 % P/P and 50 % N/P.
