

Customer: Jan Novák, Dlouhá 1, 30000 Plzeň, Czech Republic

Sample:

Sample: 08-12345

Date received: 25.11.2008

Sample type: blood

Information provided by the customer

Name: Lassie DEMO

Breed: ---

Tattoo number: 1392013

Microchip: 123 456 789 012 345

Reg. number: REGQ12345

Date of birth: 31.12.1909

Sex: female

Date of sampling: 25.11.2008

The identity of the animal has been checked.

Result: Mutation was not detected (N/N)

Legend: N/N = wild-type genotype. N/P = carrier of the mutation. P/P = mutated genotype (individual will be most probably affected with the disease). (N = negative, P = positive)

Explanation

Presence or absence of mutation c.379_392del14 FUCA1 gene causing fucosidosis in English Springer Spaniel breed was tested. This mutation causes a frame shift and formation of stop codon during alpha-L-fucosidase synthesis. Fucosidosis in ESS manifests mainly as neurological disorder. Affected individuals suffer from motoric and mental symptoms (blindness, deafness, motoric and behavioural disorders, vomiting, deglutition problems). First symptoms can be observed between 18 months and four years of age of the dog.

Mutation c.379_392del14 FUCA1 gene is inherited as an autosomal recessive trait. That means the disease affects dogs with P/P genotype only. The dogs with N/P genotype are considered carriers of the disease (heterozygotes). In offspring of two heterozygous animals following genotype distribution can be expected: 25 % N/N, 25 % P/P and 50 % N/P.

Method: SOP171-FUCO, fragment analysis

Date of issue: 30.11.2008

Date of testing: 25.11.2008 - 30.11.2008
