## **Explanation**

Presence or absence of c.3656\_3859delinsTGTCATTGG mutation in COL1A2 gene causing osteogenesis imperfecta (OI) in Beagles was tested. OI is an inherited connective tissue disease characterized by extreme bone fragility that leads to numerous fractures.

Inheritance of the causal mutation is autosomal dominant. This means that it only takes one copy of the mutated gene inherited from one parent to cause symptoms of the disease.

Method: SOP188-MPS-canine, MPS, accredited method
