Explanation

Presence or absence of c.1052T>C mutation in ASPRV1 gene causing Ichthyosis in German Shepherds was tested. The disease is characterized by abnormal peeling of the skin all over the body.

Mutation that causes Ichthyosis is inherited as an autosomal dominant trait. This means that it only takes one copy of the mutated gene inherited from one parent to cause symptoms of the disease. Dogs with suffer from Ichthyosis have the N/P or P/P genotype.
