Date of birth: 1.1.2020

Sex: female

Date of sampling: 01.02.2021

The identity of the animal has been checked.

Result: Mutation was not detected (N/N)**Legend:** N/N = wild-type genotype. N/P = carrier of the mutation. P/P = mutated genotype (individual will be most probably affected with the disease). (N = negative, P = positive)**Explanation**

Presence or absence of c.1972T>C mutation in SEL1L gene causing cerebellar ataxia in Finnish Hounds was tested. Ataxia is a disorder of coordination of movements, in Finnish Hounds is manifested as rapidly progressive, body tremors and general failure to thrive are observed in puppies as young as 3 months of age.

Mutation that causes cerebellar ataxia is inherited autosomally recessively which means that the disease develops only in those dogs who inherit mutated allele from both parents; disease affects dogs with P/P genotype only. The dogs with N/P genotype are considered carriers of the disease (heterozygotes). In offspring of two heterozygous animals following genotype distribution can be expected: 25 % N/N, 25 % P/P and 50 % N/P.
