

Result certificate #012345

Detection of gene variant c.123_124delCA

ASIP gene affecting coat color in cats

Customer: Jan Novák, Dlouhá 1, 30000 Plzeň, Czech Republic

Sample:

Sample: 08-12346 Date received: 01.01.2008 Sample type: buccal swab

Information provided by the customer

Name: Madame Théophile DEMO

Breed: Persian catDate of birth: 31.12.1909

Reg. number: (CZ)ABCD EF 123/45/XYZ Microchip: 123 456 789 012 345

Sex: female

Date of sampling: 01.01.2008

The identity of the animal has been checked.

Result: Based on gene variants examination genotype was determined A/a

Explanation

Presence of gene variant c.123_124delCA ASIP gene (locus A) affecting coat color in cats was tested. The gene, responsible for the regulation of the dark pigment distribution (eumelanin), is called ASIP (Agouti Signalling Protein). Agouti allele is marked A, and this allele is dominant. Agouti colouring appears as changing of dark and light strips in hair (this is called ticking). Allele called "a" non-agouti is inherited recessively and causes uniform coat color of cat. The a/a individual is colored uniformly and any possible drawing is not visible. Heterozygous animals A/a are carriers of a-allele for uniform colour.

Method: SOPAgriseq_feline, MPS

Date of issue: 06.01.2008

Date of testing: 12.06.2008 - 06.01.2008
