

Detection of c.295C>T mutation in ARSB  
gene causing mucopolysaccharidosis VI in  
Great Danes

**Customer:** Jan Novák, Dlouhá 1, 30000 Plzeň, Czech Republic

**Sample:**

Sample: 21-12345

Date received: 01.02.2021

Sample type: blood

Information provided by the customer

**Name:** Lassie DEMO

**Breed:** Plemeno

Tattoo number: 1392013

Microchip: 123 456 789 012 345

Reg. number: REGQ12345

Date of birth: 1.1.2020

Sex: female

Date of sampling: 01.02.2021

The identity of the animal has been checked.

**Result:** Mutation was not detected (N/N)

**Legend:** N/N = wild-type genotype. N/P = carrier of the mutation. P/P = mutated genotype (individual will be most probably affected with the disease). (N = negative, P = positive)

**Explanation**

Presence or absence of c.295C>T mutation in ARSB gene causing mucopolysaccharidosis VI in Great Danes was tested. Mucopolysaccharidosis VI is a lysosomal storage disease in which mucopolysaccharides accumulate in lysosomes. Accumulation of mucopolysaccharides results in cellular and organ dysfunction. Clinical signs include growth retardation, facial dysmorphism, skeletal deformities, corneal opacities, and increased breath sounds.

Mutation that causes mucopolysaccharidosis VI is inherited autosomally recessively which means that the disease develops only in those dogs who inherit mutated allele from both parents; disease affects dogs with P/P genotype only. The dogs with N/P genotype are considered carriers of the disease (heterozygotes). In offspring of two heterozygous animals following genotype distribution can be expected: 25 % N/N, 25 % P/P and 50 % N/P.

Method: SOPAgriseq\_canine, ngs

Date of issue: 06.02.2021

Date of testing: 01.02.2021 - 06.02.2021
